

identifying the structure of the information is a key step in program design

as data definitions get more sophisticated you will see that choosing the structure to use is a point of leverage in designing the overall program

keep calm and design the data

form of data

The diagram consists of four identical pairs of horizontal lines arranged in a row. Each pair includes a solid blue line at the bottom and a dashed blue line above it. The solid lines are all at the same vertical level, while the dashed lines are also at the same vertical level, creating a uniform gap between them across all four pairs.
